smartOperation SIMPLE. FAST. RELIABLE.

smartOperation delivers much greater simplicity in operating injection molding machines and opens up numerous advantages to the user. With this option, we allow for a separation between process setting and the later operation of the machine in production.

With the help of smartOperation, machine operators can apply the process sequence once it has been set up – with no need for in-depth application expertise.

The intelligent machine menu guides the operator through the process intuitively and enables them to start, interrupt or stop the production cycle at any time independently.

smartOperation helps the operator with simple instructions during production—even during complex processes. This guarantees stable process quality and enables machine operation that is standardized and free of faults.

Message windows "from the expert for the operator"

- Easy-to-understand message windows with guidelines and instructions
- Manual activities at the right time
- Confirmation by the operator at the touch of a button

YOUR BENEFITS:

- Expert knowledge available for everyone at any time
- Ensure standardized and error-free operation
- Lower costs due to higher machine availability and less need for skilled workers
